

Just for anyone out there thinking of changing their stereo system on 400 series (mine is an S reg) here is a list of all the cabling codes I found in my car.

I have just removed my R770 stereo with steering controls and put in a spanking new JVC stereo with Boss Amp and Boss Atlantis Subs, unfortunately I can't use the steering wheel controls anymore but who cares because the sounds now are much better, all I need now is better speakers.

Speaker wire

Front Left-	Red Green (Positive) Brown black (Negative)
Front Right-	Blue Green (Positive) Grey Black (Negative)
Back Left-	Blue Yellow (Positive) Grey White (Negative)
Back Right-	Red Yellow (Positive) Brown White (Negative)

Other Wire

White Blue-	Passenger Fuse-box Battery Direct Link.
Yellow Red-	Passenger Fuse-box Accessory Link Via 10A Fuse .
Black-	Earth.
Blue-	Electric Aerial Lead.

(At least I think it was blue or maybe Blue with white or Blue with green, not sure)

Orange, Orange blue and Blue green are dash display wiring, so not used in my case

There was Pink in there somewhere aswell but I think that was for steering wheel controls, can't remember as I never wrote everything down, though I wish I had now. DOH!

Hope this helps.
